Diazepam Compound

Published: March 1, 2026

What is Diazepam Compound?

Diazepam (Dye-AY-ze-pam)

- Diazepam is a long-acting benzodiazepine.
- It may be prescribed to patients to relax muscles prone to spasm or spasticity, or address anxiety.
- It may also be used for other conditions as determined by your doctor.
- **Diazepam is a controlled substance.**

Compounded Drug Forms: cream, gel, ointment, suppository

What should I tell my health care provider before I take this medicine?

- Allergy to diazepam
- Pregnant or may become pregnant; are breastfeeding
- Have a history of alcohol use disorder or substance use disorder
- Are taking opioid therapy
- Have depression or psychosis
- Have chronic obstructive pulmonary disease (COPD) or sleep apnea
- Have hypoalbuminemia due to kidney disease or critical illness
- Are on peritoneal dialysis, hemodialysis, continuous renal replacement therapy or prolonged intermittent renal replacement therapy
- Have cirrhosis of the liver or other liver disease
- Have acute narrow-angle glaucoma or untreated open-angle glaucoma
- Have myasthenia gravis
- Are at risk for falls

How should I use this medicine?

Follow the package directions provided by Belmar Pharma Solutions and by your prescriber. Your dosage is based on your medical condition and response to therapy. Follow the dosing schedule provided carefully.

Topical products can be applied to the inner arm, upper thigh, back of the knee, tops of the feet, and inner wrists, or as directed by prescriber. It is recommended to rotate sites to ensure even retention of the hormone. Cover treated skin with clothes to avoid contact with people or pets.

Vaginal preparations should be inserted using your finger or the applicator provided. Suppositories may leak and may be more convenient to use at bedtime.

What if I miss a dose?

- If you miss a dose, take it as soon as possible.
- If it is almost time for your next dose, skip the missed dose and continue with your regular dosing schedule.
- Do not take double the dose at once.

What should I watch for while using this medicine?

Belmar Pharma Solutions recommends yearly checkups with your provider including, but not limited to, a hormone level test, PAP smear and mammogram.

What may interact with this medicine?

- Extensive drug interactions exist with this medication.
    - Concomitant use with opioids may result in extreme sedation, respiratory depression, or other life-threatening conditions.

- Discuss your medication regiment with your health care provider to determine the best therapy for you.

What side effects may I notice from receiving this medicine?
